ADDITIVE MANUFACTURING POWDER
M789 AMPO / FE-BASED ALLOYS

Available Product Variants

| 15 - 45 μm | 45 - 90 μm |

Product Description

BÖHLER M789 AMPO is a newly developed maraging steel, which combines the mechanical properties of 1.2709 with the corrosion resistance of 17-4PH. This patent bending grade can easily be printed without any preheating and achieves a hardness of about 52 HRC with a very easy heat treatment. Furthermore, this material shows an excellent polishability, which makes it the ideal choice for inserts with conformal cooling in plastic injection molding and in any other application where a high hardness and corrosion resistance is of need.

Process Melting

VIGA

Properties

- Toughness & Ductility: high
- Wear Resistance: good
- Machinability: very high
- Dimensional stability: very high
- Polishability: very high
- Corrosion resistance: very high
- Micro-cleanliness: very high

Applications

- 3D Printing - direct metal deposition
- Automotive Racing
- Components for Displays
- Lamps/Lenses for Automotive
- Plastic Extrusion
- Wind Power
- 3D Printing - selective laser melting
- Camera lenses
- Consumer Goods - General
- Mechanical Engineering
- Powder for additive manufacturing
- Hotrunner systems
- Automotive
- Civil and mechanical engineering
- Injection Molding
- Other Components
- Tool Holders (milling, drilling, turning & chucks)
